Step 1 of the Document Andy Gave us
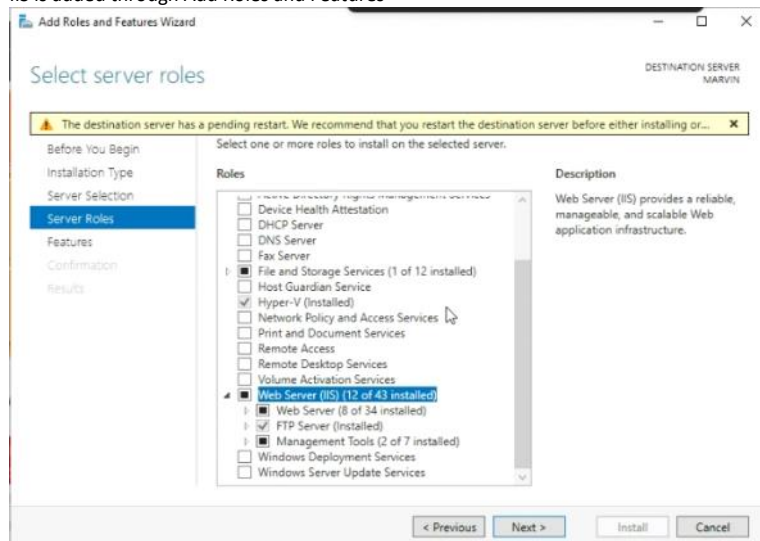

January 19, 2025   9:31 AM

Build a Static Website on IIS | Microsoft Learn

On Server Manager or Admin Center
IIS is added through Add Roles and Features

Next class will be determining what IIS modules to enable.
1. Remote in
2. Add IIS role
3. If DNS, Check we can reach the page
4. If page is served, replace page with group content
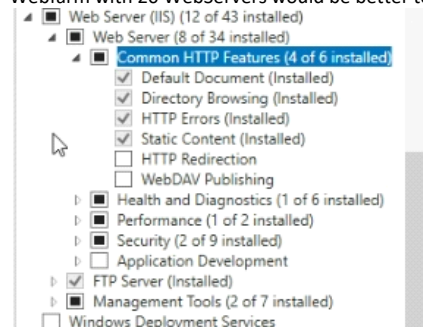

Result
- Should be able to host

HTTP Errors - give errors to specific users. Localhost will get more detailed error messages
Request Monitoring and Request Filtering - Diagnostic Tools
- Resource intensive (Don't need on)

Last 2 are always used
Webfarm with 20 WebServers would be better to install with a script

Andys settings, He was doing troubleshooting though

OR the powershell OneLiner
"
Install-WindowsFeature -name Web-Server -IncludeManagementTools"

Default IIS Page: Once this is reached, software can upload page
